MAJOR CROPS STATISTICS OF THE PHILIPPINES (2010-2014)

REPUBLIC OF THE PHILIPPINES
PHILIPPINE STATISTICS AUTHORITY

TERMS OF USE

Major Crops Statistics of the Philippines is a publication of the Philippine Statistics Authority. The PSA reserves exclusive right to reproduce this publication in whatever form. Should any portion of this publication be included in a report/article, the title of the publication and the PSA should be cited as the source of data. The PSA will not be responsible for any information derived from the processing of data contained in this publication.

ISSN-2012-0672

FOREWORD

This is the 10th edition of the statistical report entitled *Major Crops Statistics of the Philippines*. It presents the 2010 to 2014 annual data on volume of production, area planted/harvested and number of trees/hills of 21 major crops under the following commodity groupings: Cereals, Fruit Crops, Non-Food and Industrial Crops and Vegetables and Root Crops. The data are disaggregated down to the provincial level. The 21 major crops are those highlighted in the Report on the Performance of Agriculture which is released quarterly by the Philippine Statistics Authority (PSA).

In response to the needs of our data users, the report presents statistics on banana, mango, coffee and tobacco by variety.

This report was prepared by the Crops Statistics Division (CSD) of the PSA. It is intended to serve as ready reference for our various clients and stakeholders in the agriculture sector.

The PSA would appreciate comments and suggestions from our data users and readers for further improvement of this report.

LISA GRACE S. BERSALES, Ph.D.
National Statistician

EXPLANATORY NOTES

I. Crops Covered

This statistical report covers the following major crops:

COMMON NAME	SCIENTIFIC NAME	ENGLISH NAME
Palay	<i>Oryza Sativa Linn</i>	Palay/Paddy
Mais	<i>Zea mays L.</i>	Corn/Maize
Niyog	<i>Cocos nucifera L.</i>	Coconut
Tubo	<i>Saccharun officinarum L.</i>	Sugarcane
Saging	<i>Musa sapientum var.</i>	Banana
Pinya	<i>Ananas comosus L.</i>	Pineapple
Kape	<i>Coffea sp.</i>	Coffee
Mangga	<i>Mangifer indica L.</i>	Mango
Tabako	<i>Nicotiana tabacum</i>	Tobacco
Abaka	<i>Musa textiles Nee</i>	Abaca
Mani	<i>Archis hypogea Linn.</i>	Peanut
Mongo	<i>Vigna radiata L.</i>	Mungbean
Kamoteng kahoy	<i>Manihot esculenta Crantz.</i>	Cassava
Kamote	<i>Ipomoea batatas Lam</i>	Sweet Potato
Kamatis	<i>Lycopersicon esculentum Mill.</i>	Tomato
Bawang	<i>Allium sativum Linn.</i>	Garlic
Sibuyas	<i>Allium cepa Linn.</i>	Onion bulb
Repolyo	<i>Brassica oleracea L. (Capitata grp)</i>	Cabbage
Talong	<i>Solanum melongena Linn.</i>	Eggplant
Kalamansi	<i>Citrus madurensis Lour.</i>	Calamansi
Goma	<i>Hevea brasilliasis Mull. Ara</i>	Rubber

II. Sampling Methodology

A. CEREALS

The sampling design of the Palay and Corn Production Survey (PCPS) uses the results of the 1991 Census of Agriculture and Fisheries (CAF) as sampling frame. The survey domain is the province. It employs a replicated two-stage stratified sampling design. The barangay as the primary sampling unit (psu) is selected using a probability proportional to size (pps) scheme. The farming household which serves as the secondary sampling unit (ssu) is selected systematically.

1. First Stage (Primary) Sampling Unit Selection

a. For Major Palay/Corn Provinces

The primary sampling units are divided into strata of approximately equal sizes relative to the total farm area devoted to palay/corn. The largest barangays in each municipality are lumped into one stratum (generally, the 10th stratum). The remaining barangays are then divided into 9 strata such that the aggregate palay/corn farm area of all the barangays constituting any one stratum is approximately the same as that of the other strata.

Using the area devoted to palay/corn as a measure of size of the barangay, a pps sample of four (4) independent barangays is selected from each stratum. Each sample barangay represents a replicate sample for that stratum.

b. For Other Provinces

The primary sampling units are divided into 5 strata with the largest barangays constituting the 5th stratum. A pps sample of two (2) independent barangays is selected from each stratum.

2. Second Stage (Secondary) Sampling Unit Selection

Households in each sample barangay are classified into farming and non-farming. For the PCPS, the selection of sample households is limited only to the group categorized as farming households. From the list of farming households and using a random start and a sampling interval, the sample households are drawn systematically.

B. OTHER CROPS

For crops other than palay and corn, basic production statistics are generated thru the Crops Production survey which is based on non-probability sampling. That is, there is no frame where samples are selected. The domain of the survey is the province. The primary data sources are stratified into *small farms* and *large farms/plantations*. For large farms/plantations, a maximum of five (5) plantations are randomly chosen to represent the whole province. The cut-off size of large farms/plantations in hectares varies by crop and by major island grouping, Luzon, Visayas and Mindanao. For *small farms*, crops statistics generation employs two-stage sampling design. That is, for each crop

the top five (5) producing municipalities in a province serve as the primary sampling units (psu). Five producing farmers from each municipality are chosen as the ultimate sampling units (usu). Under this approach, it is possible that a farmer may be drawn as a sample for more than one crop which he plants and harvests.

B1. Data on Other Crops with Specialized Commodity Agencies

Area and production data for sugarcane and abaca include estimates generated from the PSA surveys and reports from specialized commodity agencies. For sugarcane, PSA covers cane that are used for chewing and production of panocha/muscovado and basi/vinegar and ethanol, while the Sugar Regulatory Administration (SRA) is the source of data in cane that are milled for centrifugal sugar. Abaca fiber that passes through baling stations is reported by the Philippine Fiber Industry Development Authority (PhilFIDA), while the PSA collects data on unbaled fiber. Data on area and production of coconut are the results of the Quarterly Coconut Production Survey (QCPS), a joint undertaking between the PSA and Philippine Coconut Authority (PCA).

The SRA releases monthly preliminary data, while FIDA releases data on a quarterly basis. These data are finalized only in the succeeding year. The PSA, on the other hand, allows revision of the quarterly data it collects in the succeeding quarter. As a result of this difference in the time lag in releasing the final estimates for crops with specialized commodity agencies, the latest annual data, e.g. 2005, are considered preliminary.

III. Definition of Terms

The actual physical area planted to a particular crop. In crop statistics, this generally applies to area reported for permanent crops.

Area Harvested

The actual area from which harvests are realized. This excludes crop area which were totally damaged. It may be smaller than area planted. In crop statistics, this applies to temporary crops.

Area Planted

The actual physical area planted. This generally applies to area reported for permanent crops and multi-harvest temporary crops.

***Bearing Trees/Bearing Hills/
Bearing Vines***

The number of trees/hills/vines where harvesting has been made in the past but

may or may not have borne fruits or productive during the reference period due to cyclical production pattern of the crop. Hills applies to banana. Vines applies to pepper and grapes.

Crop Production

Is the quantity produced and actually harvested for a particular crop during the reference period. It includes those harvested but damaged, stolen, given away, consumed, given as harvester's share, reserved etc. Excluded are those produced but not harvested due to low price, lack of demand and force majeure or fortuitous events, etc.

Major Crops

Refer to the top 19 crops in the Philippines, other than palay and corn which collectively account for more than 60 percent of the total crop production. These include coconut, sugarcane, banana, pineapple, coffee, mango, tobacco, abaca, peanut, mongo, cassava, sweet potato, tomato, garlic, onion, cabbage, eggplant, calamansi and rubber.

Permanent/Perennial Crops

Are crops which occupy the land for a long period of time and do not need to be replaced after each harvest such as fruit trees, shrubs, nuts, etc. These crops may be productive or fruit-bearing crops. Examples are: avocado, coffee, coconut and other fruit trees.

Temporary Crops

Crops which are grown seasonally and which growing cycle less than one year and which must be sown and planted again for production after each harvest.

Note: *A blank space in the data tables means that no harvest was made for the crop in the province.*

PALAY

The country's palay production increased from 15.77 million in 2010 mt to 18.97 million mt in 2014. Production grew by an average annual rate of 4.7 percent over the last five (5) years. Total harvest area expanded from 4.35 million hectares in 2010 to 4.74 million hectares in 2014.

Palay production in 2014 reached 18.97 million mt, 2.8 percent or 0.53 million mt higher than the 18.44 million mt output level in 2013. Area harvested slightly contracted from 4.75 million hectares in 2013 to 4.74 million hectares in 2014 or by 0.1 percent.

Nueva Ecija remained the top palay producer with 1.93 million mt of production in 2014 and shared 10.2 percent to the country's total palay output.

Isabela ranked second with 6.7 percent share to the national total. This was followed by Pangasinan, Cagayan and Iloilo with 5.9 percent, 4.7 percent and 4.5 percent shares, respectively. The combined output of these provinces totaled 6.06 million mt or 32.0 percent of the total production (Figure 1). Total harvest areas from these provinces were 1.36 million hectares, or 28.6 percent of country's total palay area (Figure 2).

Palay production in irrigated farms grew by 4.2 percent from 13.82 million mt in 2013 to 14.41 million mt in 2014. The top producing provinces were Nueva Ecija, Isabela, Pangasinan, Cagayan, and Tarlac. The combined output from these regions reached 5.15 million mt, equivalent to 35.7 percent of the country's irrigated palay production (Figure 3).

In rainfed areas, production reached 4.56 million mt in 2014. Iloilo was the top producing province with an output of 0.45 million mt. The other four (4) leading producers were Pangasinan, Maguindanao, Capiz and Nueva Ecija with a total output of 0.93 million mt, or 20.3 percent of the total rainfed production in 2014 (Figure 4).

CORN

Corn production during the last five years increased from 6.38 million mt in 2010 to 7.77 million mt in 2014. Average annual growth was 5.1 percent.

Isabela was the leading province with 1.18 million mt of corn produced or 15.1 percent share to the national output. Bukidnon and South Cotabato followed with 0.81 million mt and 0.50 million mt or 10.4 percent and 6.4 percent share, respectively (Figure 5).

In 2014, white corn production was 2.26 million mt. Maguindanao

In 2014, total corn production reached 7.77 million mt and was 5.3 percent higher than the 2013 output level of 7.38 million mt. Harvest area increased by 1.9 percent from 2.56 million hectares in 2013 to 2.61 million hectares in 2014.

posted the highest share with 0.37 million mt or 16.5 percent of the total white corn output (Figure 6). Lanao Del Sur and Lanao Del Norte contributed 0.19 million mt and 0.17 million mt, respectively. In terms of harvest area, Maguindanao had the largest at 143.26 thousand hectares.

Yellow corn production in 2014 reached 5.51 million mt or 5.0 percent higher than the 5.25 million mt record in 2013. Isabela was the top producer with 1.16 million mt, accounting for 21.1 percent of the nation's total yellow corn output. Bukidnon and South Cotabato ranked second and third, respectively, with corresponding shares of 0.69 million mt and 0.44 million mt (Figure 7). These top 3 (three) provinces had a combined total hectareage of 529.15 thousand hectares representing 40.1 percent of the country's area harvested to yellow corn.

ABACA

From 2010 to 2014, production of abaca fibers grew by an average of 0.6 percent annually. On the other hand, area planted contracted by 0.04 percent. In 2014, production was recorded at 68.05 thousand mt which was 4.8 percent higher than the 2013 level of 64.95 thousand mt. This could be attributed to more harvesting and stripping due to good price and higher demand in Catanduanes, Bukidnon, Misamis Oriental, Agusan del Sur, Agusan del Norte, Negros Oriental, Negros Occidental, Palawan, and Oriental Mindoro. Abaca farms in Compostela Valley and Davao Oriental had already recovered from stress brought by typhoon “Pablo.” The provision of skills training program of the Philippine Fiber Industry Development Authority (PhilFIDA) on the operation and maintenance of abaca spindle stripping machine in Zamboanga City also contributed for the increase in production.

Catanduanes remained the top producing province in 2014 contributing 25.44 thousand mt or 37.4 percent share to the country’s total abaca output. This was followed by Northern Samar, Davao Oriental, Surigao del Sur, and Davao del Sur with combined output of 18.54 thousand mt (Figure 8).

In 2014, total area planted to abaca dropped to 134.77 thousand hectares from 138.37 thousand hectares in 2013 or by 2.6 percent. Catanduanes recorded the largest area planted at 25.37 thousand hectares or 18.8 percent share to the national total (Figure 9).

COCONUT

Coconut production from 2010 to 2014 decreased at an average annual rate of 1.3 percent. Likewise, area planted and number of bearing trees dropped by 0.5 percent, and 0.8 percent, respectively. In 2014, production of coconut at 14.70 million mt was 4.3 percent lower than the 2013 level of 15.35 million mt. Decreases were attributed to the damages brought by typhoon “Yolanda” in Leyte, Eastern Samar, Samar, Biliran, Aklan, Capiz, Iloilo, Romblon, Cebu, and Surigao del Norte. Effect of typhoon “Glenda” in Albay, Sorsogon, Masbate, Camarines Sur, Quezon, Laguna, Batangas; and typhoon “Ruby” in Samar and Eastern Samar. Extreme heat during fruit development affected the production in Zamboanga del Sur and Zamboanga del Norte. There were also non-harvesting on coconut trees treated with pesticides against Coconut Scale Insect (CSI) Infestation in Batangas, Laguna, and Cavite.

The top five (5) coconut producing provinces in 2014 were Quezon with 1.18 million mt share to the national output. This was followed by Davao del Sur, 0.94 million mt; Zamboanga del Norte, 0.74 million mt; Davao Oriental, 0.72 million mt; and Maguindanao, 0.62 million mt. Combined output from these provinces shared 28.6 percent to the country’s total coconut production (Figure 10).

In 2014, total area planted to coconut dropped to 3.50 million hectares from 3.55 million hectares in 2013, or by 1.4 percent. Likewise, the number of bearing trees

declined to 330.52 million in 2014 from 338.40 million in 2013. The decline was attributed to the adverse effects of typhoons “Yolanda”, “Glenda”, and “Ruby.”

Quezon was the leading province based on area planted of 338.72 thousand hectares or 9.7 percent share to the total area planted to coconut. Zamboanga del Norte came next with 208.87 thousand hectares, followed by Davao Oriental with 143.58 thousand hectares (Figure 11).

COFFEE

Production of dried coffee berries of all varieties from 2010 to 2014 dropped at an average annual rate of 5.4 percent. During the same period, area planted and number of bearing trees went down by 0.8 percent and 1.5 percent, respectively.

In 2014, coffee production dropped to 75.45 thousand mt, 4.0 percent below the 2013 level of 78.63 thousand mt. Decreases were due to cutting of old and less productive trees, effect of heavy rains and strong wind during fruit development in Sultan Kudarat, shifting to Cavendish and señorita banana production in Compostela Valley and to lakatan and latundan in Davao City. Decreases were also due to damages brought by typhoon “Yolanda” in Capiz and Iloilo and typhoon “Labuyo” in Kalinga during the flowering stage of the crop. Production was also affected by long dry season while some bearing trees were affected by scale insects in Batangas. There was also reported shifting of some coffee farms to production of pineapple in Cavite.

Sultan Kudarat topped all the coffee producing provinces contributing 22.61 thousand mt or 30.0 percent of the country’s total coffee production. This was followed by Davao del Sur, Sulu, Bukidnon, and Cavite which had a combined output of 17.65 thousand mt (Figure 12).

Area planted to coffee increased to 117.45 thousand hectares in 2014 from 116.46 thousand hectares in 2013 or by 0.9 percent. This was attributed to the expansion programs of various agencies such as the National Greening Program of the Department of Environment and Natural Resources (NGP-DENR) and the High Value Crops Development Program of the Department of Agriculture (HVCDP-DA). Number of bearing trees contracted by 0.8 percent, from 80.28 million trees in 2013 to 79.65 million trees in 2014 brought about by the cutting of trees and shifting to banana production in Compostela Valley and Davao City, cutting of old and less productive trees in Sultan Kudarat, and effect of typhoon “Yolanda” in Leyte and Capiz.

Sultan Kudarat, the top coffee producing province also recorded the largest area planted at 19.73 thousand hectares and shared 16.8 percent to the national total (Figure 13).

The major varieties of coffee produced were Robusta with 52.17 thousand mt, Arabica, 18.03 thousand mt; Excelsa, 4.73 thousand mt; and Liberica, 0.53 thousand mt (Figure 14).

Arabica coffee. This variety comprised 23.9 percent and 16.4 percent of the total coffee production and area planted, respectively. In 2014, production of Arabica coffee dropped to 18.03 thousand mt from 18.59 thousand mt in 2013 or by 3.0 percent attributed to cutting of old and less productive trees and effect of heavy rains and strong wind during fruit development in Sultan Kudarat. However, area planted went up to 19.30 thousand hectares in 2014 from 19.19 thousand hectares in 2013 due to expansion areas in Sarangani and South Cotabato.

Sultan Kudarat, the top producing province shared 9.90 thousand mt which was more than half of the country’s total Arabica coffee output (Figure 15).

Excelsa coffee. In 2014, production of Excelsa coffee at 4.73 thousand mt was 3.9 percent below the 4.92 thousand mt level in 2013. Likewise, area planted decreased by 1.6 percent from 8.59 thousand hectares in 2013 to 8.45 thousand hectares in 2014.

The major producers were Sulu, Davao del Sur, North Cotabato, Davao City, and Batangas which accounted for 68.0 percent of the total Excelsa coffee production in 2014 (Figure 16).

Robusta coffee. In 2014, production of Robusta coffee at 52.17 thousand mt was 4.4 percent below last year’s 54.56 thousand mt. On the other hand, area planted increased to 88.42 thousand hectares in 2014 from 87.37 thousand hectares in 2013 or by 1.2 percent. This variety shared 69.1 percent of the total coffee production and 75.3 percent of the total area planted.

Sultan Kudarat was the major producing province contributing 12.71 thousand mt or a share of 24.4 percent to the country’s total Robusta coffee production (Figure 17). The same province posted the largest area planted at 13.03 thousand hectares or 14.7 percent of the total area planted to Robusta coffee.

RUBBER

During the period 2010-2014, rubber production, area planted, and number of tappable trees grew at an average annual rate of 3.5 percent, 12.0 percent, and 7.5 percent, respectively. In 2014, production of rubber cup lump grew by 1.9 percent to 453.05 thousand mt, from 444.82 thousand mt in 2013. Gains in output were attributed to the increase in number of trees tapped in rubber producing provinces of Mindanao, namely, Basilan, North Cotabato, Bukidnon, Agusan del Sur, and Zamboanga del Norte.

The top rubber producing province of the country was North Cotabato at 173.11 thousand mt and shared 38.2 percent to total rubber production. This was followed by Zamboanga Sibugay with 143.08 thousand mt. The combined output from these provinces comprised 69.8 percent of the country's total cup lump production (Figure 18).

In 2014, total area planted to rubber reached 217.69 thousand hectares, 17.4 percent more than the 2013 level of 185.48 thousand hectares. Similarly, number of tappable trees grew from 47.38 million to 52.46 million or by 10.7 percent. The province of Zamboanga Sibugay had the largest area planted to rubber at 70.21 thousand hectares, contributing 32.3 percent to the national total (Figure 19).

SUGARCANE

From 2010 to 2014, total sugarcane production for all uses grew at an average annual rate of 11.6 percent. Area harvested expanded by 5.5 percent. In 2014, sugarcane output improved by 1.8 percent to 25.03 million mt. This was 24.58 million mt in 2013. The increase was brought about by higher yield attained as a result of efficient use of fertilizer in Negros Occidental and Negros Oriental. There were also expansions in harvest areas in Kalinga, Isabela, Capiz, Cebu, and Leyte.

Negros Occidental was the biggest sugarcane producer in 2014 at 12.72 million mt accounting for more than half of the country's total sugarcane output. This was followed by Bukidnon, Negros Oriental, Batangas, and Iloilo with combined output of 8.10 million mt or a share of 32.4 percent (Figure 20).

Area harvested to sugarcane was recorded at 432.03 thousand hectares, 1.2 percent lower than last year's 437.07 thousand hectares. Negros Occidental, the biggest sugarcane producer, likewise, had the largest area harvested at 186.79 thousand hectares covering 43.2 percent of the country's total area harvested to sugarcane in 2014 (Figure 21).

TOBACCO

From 2010 to 2014, production of tobacco of all varieties continuously increased from 40.53 thousand mt to 61.42 thousand mt. During the five-year period, it grew at an average annual rate of 11.0 percent. In 2014, production at 61.42 thousand mt was 14.3 percent more than the 2013 level of 53.75 thousand mt. Increases were attributed to expansion in area planted to Burley tobacco in Isabela and Occidental Mindoro and to Virginia tobacco in Misamis Oriental. In Ilocos Sur, higher output was due to sustained good price of Virginia tobacco. In Ilocos Norte, production increased due to additional area planted to Virginia and Burley tobacco. These areas came from mungo, corn, and from previously in-fallow areas.

The top producing provinces were Ilocos Sur and Isabela with a collective output of 35.81 thousand mt comprising 58.3 percent to the national tobacco production (Figure 22).

In 2014, area planted to tobacco went up by 4.7 percent to 36.08 thousand hectares from 34.45 thousand hectares in 2013. Ilocos Sur had the largest area planted at 14.75 thousand hectares and shared 40.9 percent to the country's total tobacco area. This was followed by Isabela with 6.47 thousand hectares, Ilocos Norte, 3.76 thousand hectares, and La Union, 3.08 thousand hectares (Figure 23).

Ilocos Sur had the largest area planted at 14.75 thousand hectares and shared 40.9 percent to the country's total tobacco area. This was followed by Isabela with 6.47 thousand hectares, Ilocos Norte, 3.76 thousand hectares, and La Union, 3.08 thousand hectares (Figure 23).

The major variety of tobacco produced was Virginia at 31.32 thousand mt contributing 51.0 percent to the total tobacco production. Native variety had 10.17 thousand mt and other varieties, mostly Burley with 19.93 thousand mt (Figure 24).

Virginia tobacco.

This variety comprised 51.0 percent and 58.6 percent of the total tobacco production and area planted, respectively. From 2010 to 2014, Virginia tobacco production increased at an average annual rate of 13.6 percent and area

planted by 5.0 percent. In 2014, production was recorded at 31.32 thousand mt, 10.9 percent higher than last year's output of 28.25 thousand mt. Likewise, area planted increased to 21.13 thousand hectares in 2014 from 20.54 thousand hectares in 2013 or by 2.9 percent. Ilocos Sur reported the highest production at 21.74 thousand mt representing 69.4 percent of the total tobacco production (Figure 25). The same province had the largest area planted at 13.87 thousand hectares which was 65.6 percent of the total area planted to Virginia tobacco.
